Evo X Catch Can Kit
Instruction Supplement

Please read the following instruction revision Kozmic Motorsports Evo X Catch Can Kit prior to installation or use.

DRAIN PLUG TORQUE SPECIFICATION: 120 IN/LB

Do not over tighten the drain plug. The plug and the fitting it goes into are both aluminum, and over torquing will cause thread damage and potentially make the plug un-removeable.

If your drain plug has seepage, do not over tighten in an attempt to get leak to stop. Instead, coat the threads with NON HARDENING pipe sealer, or pipe "dope". This is available at any hardware store in the plumbing section.

Drain Plug Specifications: The drain plug is 3/8 npt. The allen socket in the plug is 5/16. Some 8mm allen sockets wrenches will work, however the correct size is 5/16.
